0962學期 課程基本資料

系所 / 年級  | 經管系 1年級  | 課號 / 班別  | 82U00023 / C
學分數  | 3學分  | 選 / 必修  | 必修
科目中文名稱  | 經濟學  | 科目英文名稱  | Economics
主要授課老師  | 林郁青  | 開課期間  | 一學期
人數上限  | 2人  | 已選人數  | 0人

起始週 / 結束週 / 上課地點 / 上課時間

教學綱要
Master economic fundamentals. Investigate what is meant by sustainability as an ethic and as a policy standard. Understand the interrelationships between sustainability and factors such as income, poverty, educational attainment, empowerment of women and ethnic minorities, international trade, population growth, and taxes. Evaluate policy proposals such as microcredit and ecological tax reform. Understand the role of discounting in formulating policies affecting future generations, and evaluate the question of whether discounting can be made consistent with sustainability. Evaluate the characteristics and performance of past forms of economic development assistance programs, and develop a theory of sustainable economic development. Critically assess various methods for measuring progress toward more sustainable economic development. Investigate issues associated with more sustainable production and consumption. Consider in detail the problem of moving toward more sustainable local economic development, utilizing both economic models of local economic development, and case studies (such as certified sustainable forestry) involving more sustainable or conservation-based development. This is a Communication and Ways of Thinking (CWT) upper-division General Education (GE) course that can be used to meet the upper division area D requirement. You can only use one CWT course in the upper division GE component of your baccalaureate. Consistent with the HSU General Education CWT designation, students will further develop their ability to think critically and communicate clearly and effectively. You will learn methods of economic analysis related to sustainability, how to apply those methods to draw conclusions, and how to communicate your analysis through oral presentations and written reports. You will expand your understanding of how people interact in an economy, and how the economy exists in a broader environmental and social context. Emphasis will be placed on helping you relate what you learn in class to "real world" applications.

一、教學目標 (Objective)

二、先修科目 (Pre Course)

三、教材內容 (Outline)

Master economic fundamentals. Investigate what is meant by sustainability as an ethic and as a policy standard. Understand the interrelationships between sustainability and factors such as income, poverty, educational attainment, empowerment of women and ethnic minorities, international trade, population growth, and taxes. Evaluate policy proposals such as microcredit and ecological tax reform. Understand the role of discounting in formulating policies affecting future generations,
and evaluate the question of whether discounting can be made consistent with sustainability.
Evaluate the characteristics and performance of past forms of economic development assistance programs, and develop a theory of sustainable economic development. Critically assess various methods for measuring progress toward more sustainable economic development. Investigate issues associated with more sustainable production and consumption. Consider in detail the problem of moving toward more sustainable local economic development, utilizing both economic models of local economic development, and case studies (such as certified sustainable forestry) involving more sustainable or conservation-based development. This is a Communication and Ways of Thinking (CWT) upper-division General Education (GE) course that can be used to meet the upper division area D requirement. You can only use one CWT course in the upper division GE component of your baccalaureate. Consistent with the HSU General Education CWT designation, students will further develop their ability to think critically and communicate clearly and effectively. You will learn methods of economic analysis related to sustainability, how to apply those methods to draw conclusions, and how to communicate your analysis through oral presentations and written reports. You will expand your understanding of how people interact in an economy, and how the economy exists in a broader environmental and social context.
