教學綱要

一、教學目標 (Objective)
Upon Conclusion of the course, the student should: 1. Learn how the project manager creates task commitment and positive working norms, establish clear roles, and manages conflict. 2. Be able to use project management software throughout the semesters.

二、先修科目 (Pre Course)
The course provides the study of the system approaches to planning, scheduling, and controlling business organizations for the larger and more complex projects. This applied course provides techniques for managing each phase of the project life cycle, including crafting scope, defining tasks and work breakdown structures, estimating time and costs, controlling activities via schedules budgets and milestone charts, and closing the project by documenting, client debriefing, and team member assessments. Quality management and leading edge project management practices by global companies are emphasized.

三、教材內容 (Outline)
Upon Conclusion of the course, the student should: 1. Learn how the project manager creates task commitment and positive working norms, establish clear roles, and manages conflict. 2. Be able to use project management software throughout the semesters.
