Green invention of 3-in-1 Tremella Fuciformis skin care products

TREMELLA FUCIFORMIS BERK EXTRACTS FOR RESISTING ULTRAVIOLET LIGHT AND MANUFACTURING METHOD THEREOF

Tremella Fuciformis is a special kind of mushroom known for its polysaccharides and antioxidants, and it is a very good medicinal mushroom. The biologically active components of Tremella Fuciformis were extracted, and they have been found to protect the skin cells against ultraviolet (UVB) irradiation damage. The patent of this kind of Tremella Fuciformis has already applied for Taiwan pending.

The skin care products of Tremella Fuciformis have been developed. In addition, in order to reduce the number of times women carry skin care products, the-package design is more innovative. We use the 3-in-1 control of 3-in-1 bottles of skin care products container into one, and the material of these bottles are made from biodegradable polylactic acid (PLA). This internal 3-in-1 bottle is not only environmentally friendly, but also dangerous.

From the environmental breakdown, in summary, the internal and packaging design of this product has reached the true value of green.
