

UR LIFE MORE COMFORTABLE
Fe Blade Slicer

Content

When using the traditional knife, it is easy to get hurt by the used sharp blade because the ways people press the blade. So, I designed this new slicer, its use like a press punching machine. Putting the blade in the groove and then pressing the top button of slicer. It can be cut out. The used blade will stay in the box. It is easy to observe from outside to see if the blade slices box is getting full or not. It is not only security for using, but also reducing material waste.

Features

The first feature is User-friendly

- No more hand touching to the blade, in the use of safer and cleaner.
- After using the blade, you don't need to be afraid of getting hurt from it.
- Easy to use.

The second feature is a convenient function

- Changing process becomes simple and easy.
- The cut out blade will stay in the box. It is easy to see if the blade slices box is getting full or not.

The third feature is Energy Reduction

- Replacing the blade only after using. This design may response to environmental protection and reducing material waste.
